

Spaghetti-Coders Jungle Sprint 3

EJ Lee
Sam Stobbelaar
Jeff Bradley
Vlad Stepanuga
John Miller

Jungle Refresher

- 8 animals per player, ranked from 1 to 8: Rat, Cat, Wolf, Dog, Panther, Tiger, Lion, Elephant
- **Every piece** can move one space *horizontally* or *vertically* to an **open land space** or a '**weaker**' enemy piece. Pieces can't move into their own den.
- Certain pieces have special moves:
 - **Rat** can move freely in water
 - **Rat** can capture **Elephant** (but not from a water space)
 - **Lion** and **Tiger** (Big Cats) can jump over water *horizontally* or *vertically*
- When a piece moves onto an enemy **trap**, it is vulnerable to being captured by **any** enemy piece
- Winning:
 - Player moves a piece into the opponent's den
 - Player captures all of the opponent's pieces

Processes

- The team utilized mainly Agile methodologies to complete this project, using:
 - Incremental Development
 - Paired-Programming
 - Agile-style meetings:
 - Sprint Planning Sessions
 - Bi-weekly Standups
 - Sprint Reviews and Retrospectives

Tools

JUnit 5

reactstrap

slack

Design Decisions

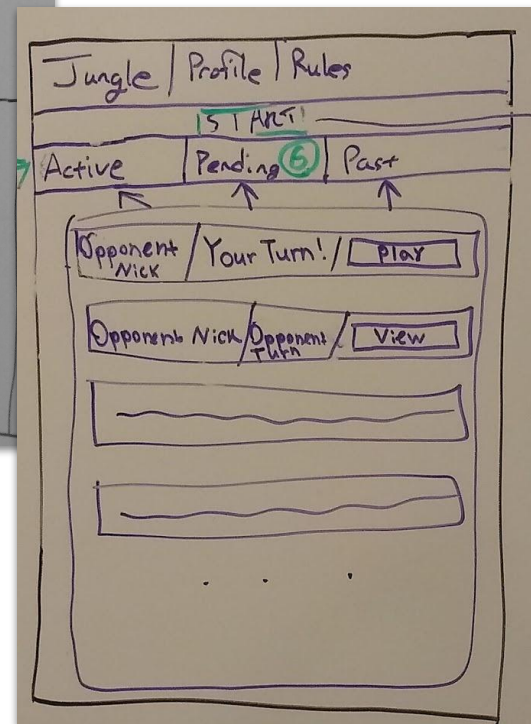

- Welcome Page
- Allow user to either make a new account or use their existing account
- Main Page
 - Tabs for Home, Profile, & Rules
 - Three types of games contained in inner tabs: Active, Pending, & Finished
 - Invite Button: by nickname or random
- Database
 - All games and players stored in SQL database to allow end-to end communication

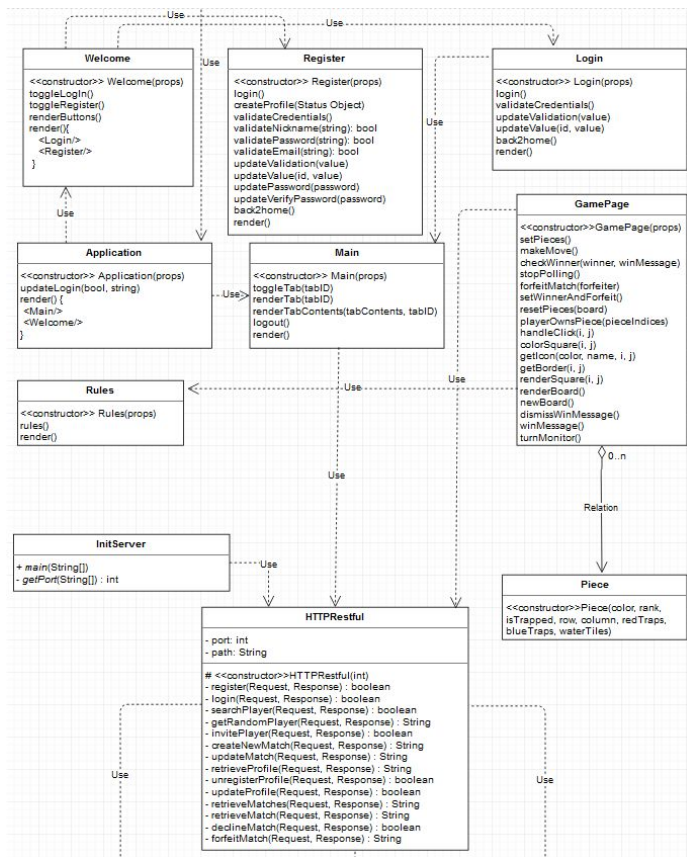

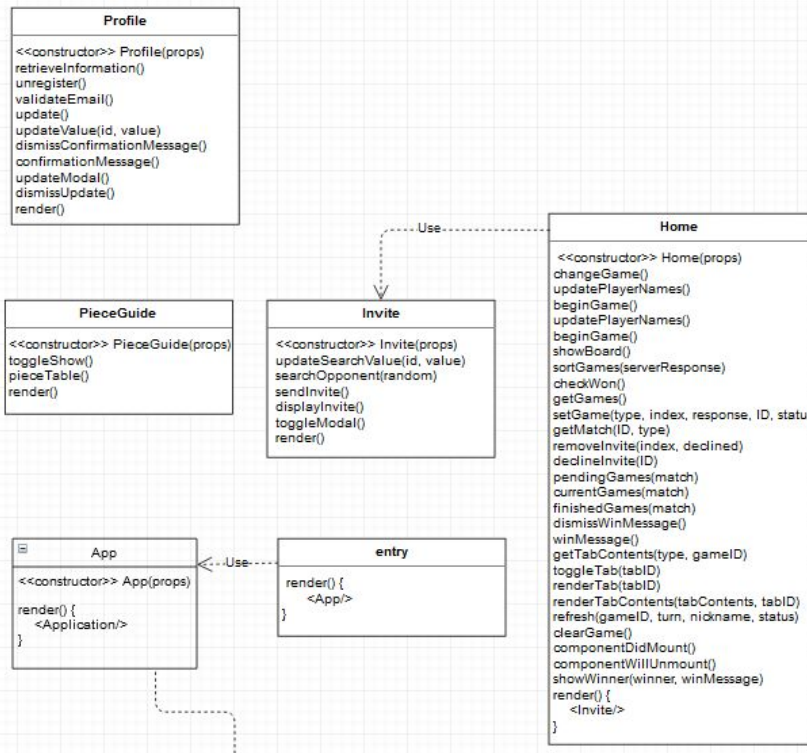

Composite Design Pattern: Pieces

Piece: made up of Rat, Cat, BigCat, etc.

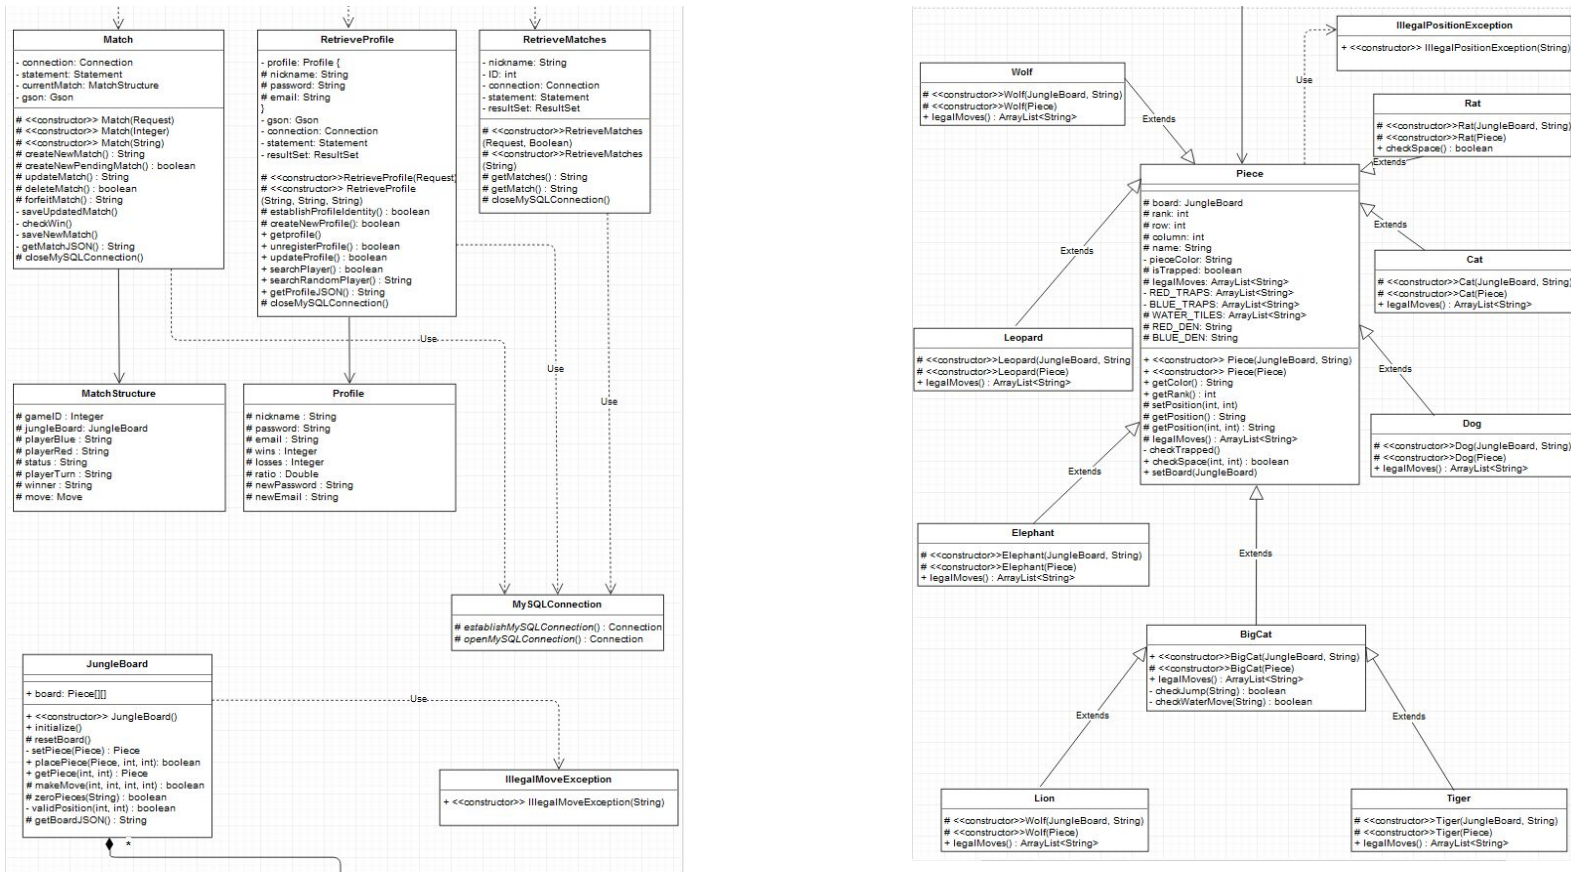

BigCat: made up of Lion, Tiger

Sprint Retrospective

- Several official scrum meetings were held
 - Sprint planning meeting to divide User-Stories
 - Weekly stand-ups to review our completed tasks
 - Several reviews with the Product Owner to review the completed User-Stories and the website's UI
- Improvements from last Sprint
 - Product Owner was satisfied with the website's design
 - Overall better communication/coordination between team members
 - More paired programming to complete tasks
